

**Movendo Technology** continues to innovate in clinical applications thanks to its collaboration with its network of clinical partners globally. It continuously develops new rehabilitation protocols covering assessment and intervention in orthopedics, neurology, geriatrics, and sport.

Thanks to its modular nature, the hardware platform makes it possible to consistently adapt to new protocols.

Thanks the Artificial Intelligence within hunova, with its machine learning algorithms, it is possible to collect more accurate biomechanical and clinical parameters that allow to personalize the rehabilitation and training process, also through real time modification of each exercise's level of difficulty.

**Movendo Technology** has developed solutions based on predictive methods with the aim to implement an healthy lifestyle and an efficient prevention.

## Rehabilitation protocols and macroareas

Orthopedics/Sport

Neurology

Geriatrics

Protocols

Ankle sprain in inversion grade II

•

•

Achilles tendon tear

•

•

Macroareas

Asymmetric load

•

Balance training

•

•

•

Proprioceptive variation

•

Sensory evaluation and training

•

•

•

Ankle stretching

•

•

Ankle biomechanical limits

•

•
